CELUPLAST
Lo-Call: 1850 332299

Technical Data:

Dimensions (height x width x thickness):
19x19x8cm, 19x9x8cm

Packing:

Model	Qty. per box	Weight
Satined, size 19x19x8cm	5	2.25
Non-satined, size 19x9x8cm	6	2.25
Corner Blocks	4	1.26

Compressive Strength:

	MPa
Minimum Compressive Strength	10.13
Average Compressive Strength	12.60

Heat Transmission ration: $U = 2.97$ (W/m² x K)

Soundproof: -42 dB

Fire Classification:

E60 as per PN-B-02851-1:1997 and PrEN 13501-2

Light Transmittance:

- for colourless glass blocks 80%
- for coloured glass blocks 60%

CELU GLASS

Our glass blocks are available in a variety of size, colour and models.

During production, two halves of a glass block are fused, creating some degree of vacuum in the internal cavity, which gives improved thermal insulation and strength parameters of the finished product.

Then the borders of each block are coated with a special paint (usually white colour) to improve adhesion of the mortar these opaque borders will perfectly conceal the mortar and reinforced view, which otherwise would impair the aesthetic effect of any finished glass block walling.

After fusion and forming the blocks are cooled down to the ambient temperature to avoid development of internal stress and cracks.

Satined glass blocks are matted glass blocks obtained through etching of the surface with acid. A surface achieved in this way (as opposed to the sand blasted surface) feels very smooth and it is easy to clean.

We recommend this product wherever privacy is required, for example in the shower enclosures and partitions between a bathroom and a lobby.

If you are searching for light-diffusing glass blocks we recommend acid etched products.
