

CASCADE OGEE GUTTER

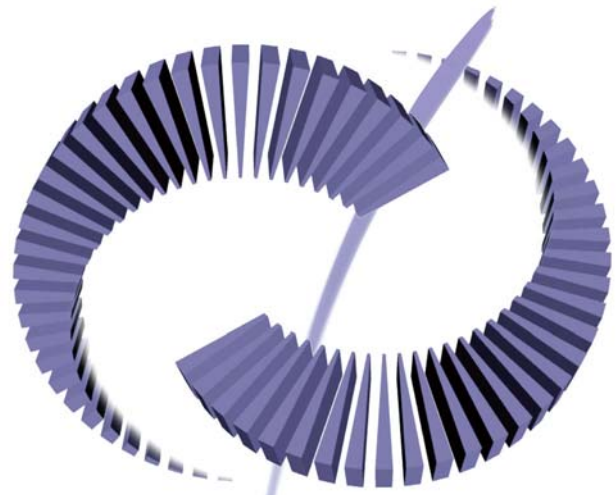

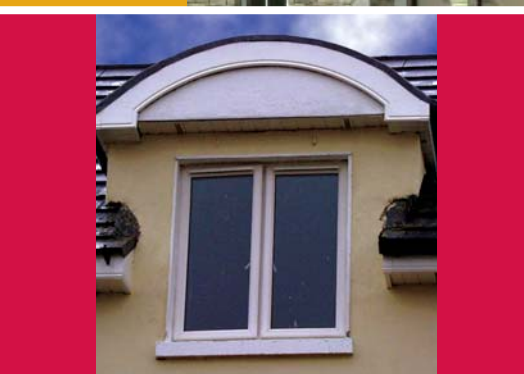

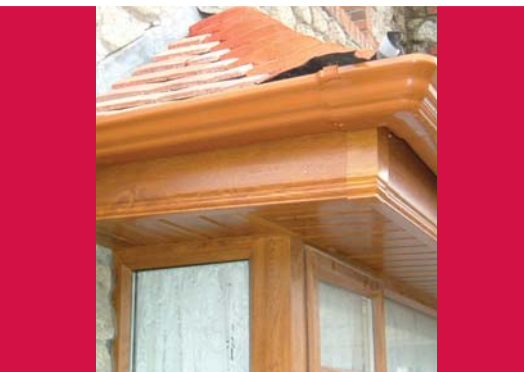

Celuplast's flagship in the Rainwater industry. Exhaustive research went into the design and aesthetics of our cascade range of rainwater products. We believe we have produced the ultimate in ogee gutter, blending good looks with superb functionality. Our double ogee design cuts out the need for left and right-handed fittings while our interchangeable outlet connections provide for the use of round or square downpipes to accompany the gutter profile.

Cascade is available in white, black or brown as standard and a range of colours to order. Celuplast Cascade is the perfect accompaniment for our Upvc roofline system.

FLUME CRESCENT

Still the standard bearer gutter system in many parts of Ireland and the UK. Half round gutter was the first Upvc rainwater product to take over from **Asbestos and Cast Iron**. Its functionality has been tried and tested for many years and it remains to this day a very popular choice with many fitters and homeowners alike.

With our **Flume Crescent** range of **Half Round Gutter** and **Round Downpipe** Celuplast have created a system that is sympathetic to traditional styling and yet aesthetically completely acceptable when fitted on modern day buildings. With interactive Downpipe options, customers can have Round or Square Downpipe to compliment our half round gutter range. Available in Black as standard and colours to order Flume Crescent adds further variety and options when fitting rainwater products.

GUTTER	
<p>SIZE A = 110mm B = 55mm C = 22mm</p>

<p>SIZE - 68mm L = 5.5mm 4mm 2.5mm T = 2mm</p>	
STRAIGHT COUPLER	BRANCH
SHORT BEND	PIPE-FITTING BRACKET
SHOE	RAINWATER HEAD

TITAN SQUAREFLOW

Titan Square Flow Gutter fits perfectly into the Celuplast Rain Water Range. Square Flow is the preferred option for many fitters as its simple yet sleek finish gives great compliment to our Upvc Fascia and Soffit range. Available in Black and White as standard and various colours as special orders Titan gives the customer even more choice when considering rainwater products.

Titan comes with a full range of accessories and fittings and can be fitted with round or square downpipe. Its angular design leads to rapid water dissipation, which increases its capacity on larger roofs, while its unobtrusive appearance won't take from the aesthetics of the building.
